Go 2 mind map

Go 2
2.1 Measuring crowds: counts, trajectories and density
Trajectories
Two densities
Speed and flow
In the field
2.2 Macroscopic models: crowds as a fluid
Conservation
Demand and supply
Bottleneck jam
2-D and uses
2.3 Cellular automata and floor fields
Cells
Floor fields
Updates
Calibrate
2.4 The social force model
Equation
Forces
Faster is slower
Pros and cons
2.5 The crowd model family: choosing the right tool
Seven families
Velocity and steps
Heuristics
Choose
2.6 Route and exit choice
Shortest path
Quickest path
Equilibrium
Guidance
2.7 Evacuation modelling: RSET and ASET
Two clocks
Hydraulic
Pre-movement
Distribution
2.8 Calibration, validation and uncertainty
Three checks
Calibrate
Many observables
Uncertainty

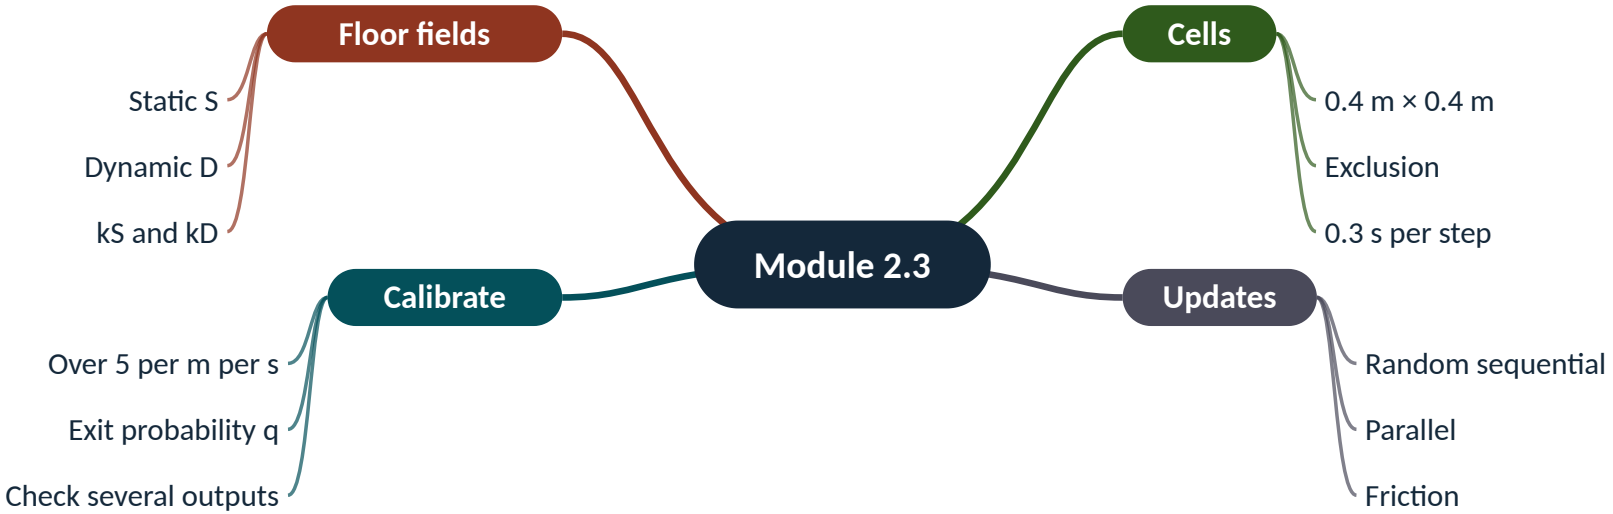

2.1 Measuring crowds: counts, trajectories and density

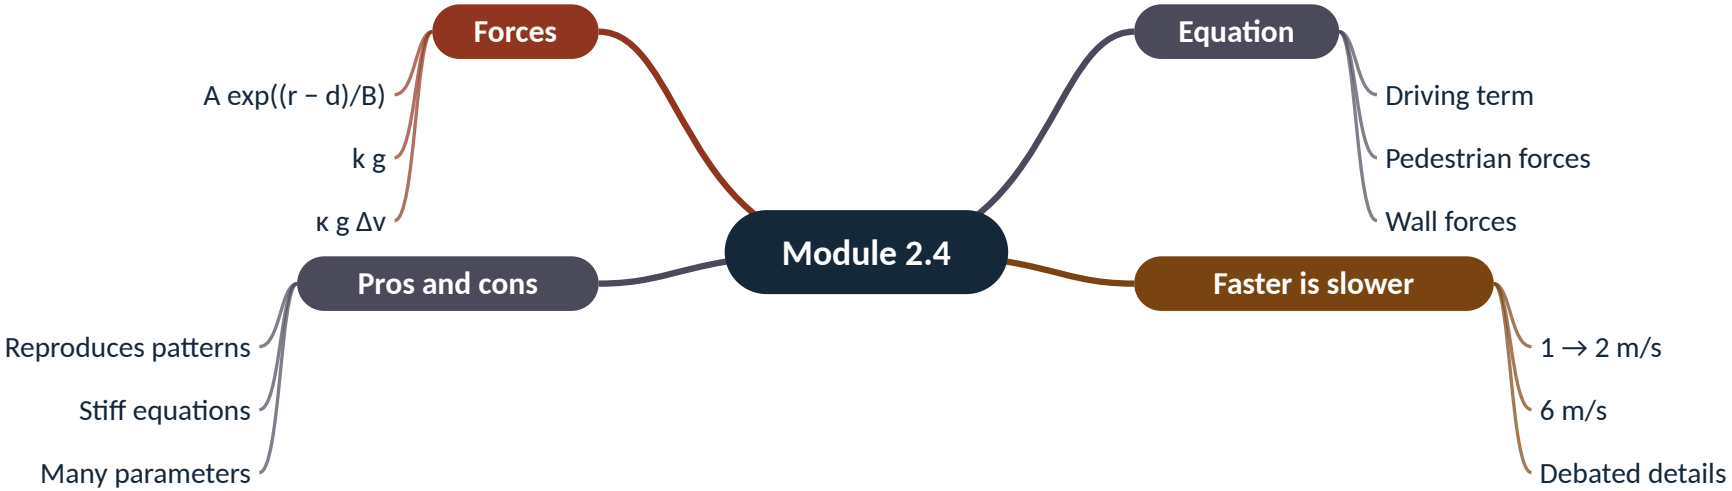

2.2 Macroscopic models: crowds as a fluid

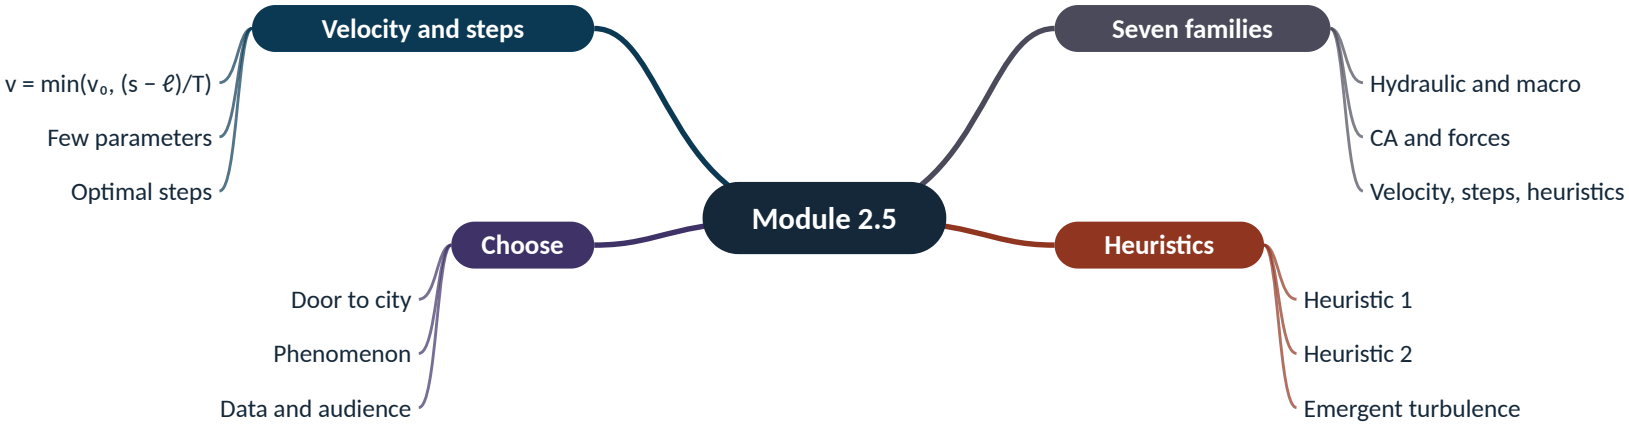

2.3 Cellular automata and floor fields

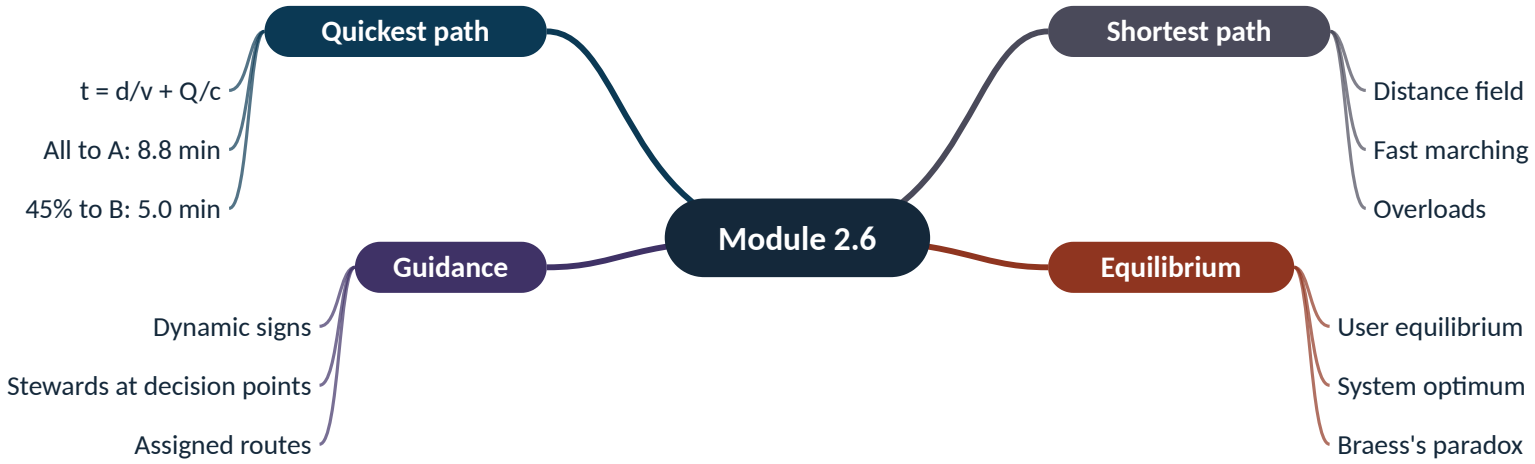

2.4 The social force model

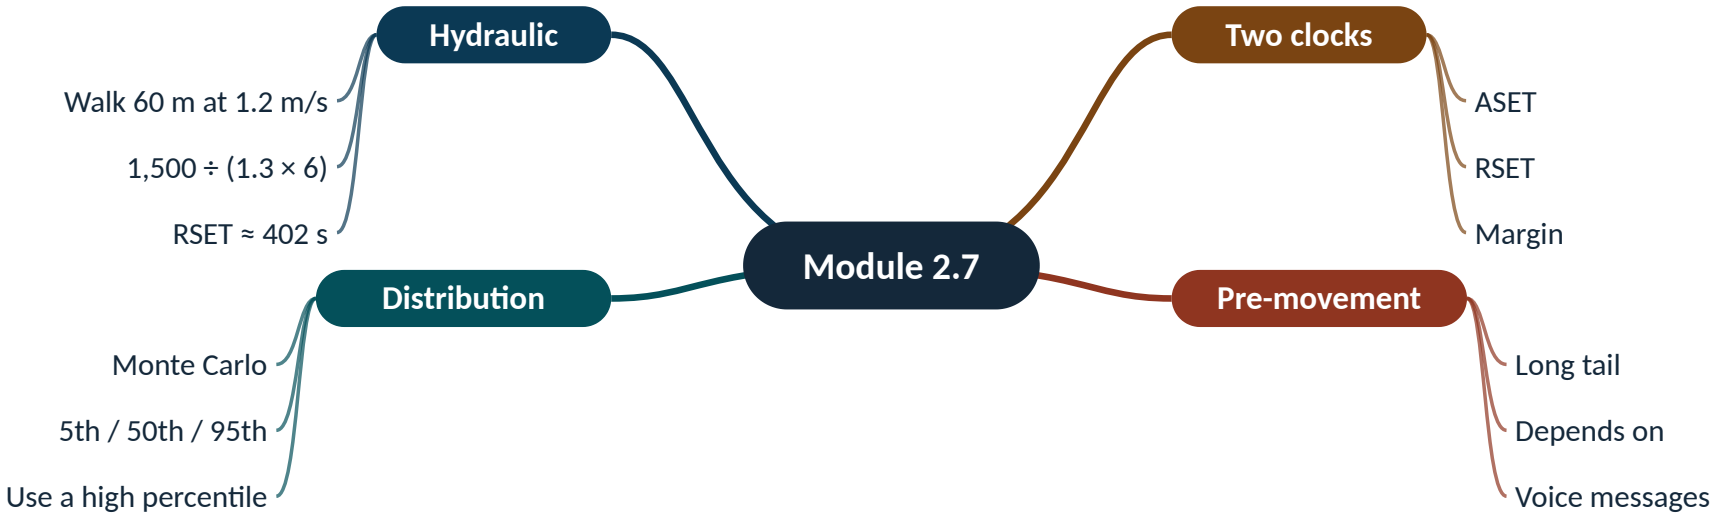

2.5 The crowd model family: choosing the right tool

2.6 Route and exit choice

2.7 Evacuation modelling: RSET and ASET

2.8 Calibration, validation and uncertainty
